AMUSEMENT RIDES AND DEVICES

The classification of an amusement ride or device is determined by obtaining values for the speed, height and acceleration of the device, computing the dynamic product of those values and assessing the intrinsic safety of the device in accordance to the AS35331-2009 standards.

The standards AS35331-2009 specifies design, manufacture and construction of fixed and portable amusement rides and devices in order to keep you and your children safe.

Inspections and testing of amusement rides must be carried out by competent persons. If a deflection of the amusement ride or device is found, repairs have to be carried out under supervision of the designer or other competent persons.

The designer of an amusement ride is required to; identify hazards associated with the use of the device ensure that the amusement is made to determine the risks associated with such hazards and control such risks by implementing measures to either eliminate or minimize risks.

At ASE we have highly qualified engineers who is certified to inspect, supervise and advise about structure to amusement rides and devices so that they are up to standards and safe for all patrons.
